BALLOT HAND COUNT STUDY

DATE: Wednesday, January 16 – Thursday, January 24, 2008

LOCATIONS:

- (1) Centennial Hall, 200 South Cascade Avenue, Colorado Springs, CO 80903
- (2) Powers Boulevard Branch Office, 5650 Industrial Place, Colorado Springs, CO 80909

PARTICIPANTS:

1. Robert C. "Bob" Balink, Clerk & Recorder
2. Terry Sholdt, Chief Deputy
3. Liz Olson, Manager, Election Department
4. Keri Ashley, Assistant Manager, Election Department
5. John Hollenbaugh, Supervisor, Information Systems
6. Janice Littlefield, GIS Technician
7. Alissa Bohall, Election Specialist
8. Jace Richards, Election Specialist
9. Election Judges (8 Republicans, 7 Democrats)

PURPOSE: There are numerous "experts" who regularly question the trustworthiness of election equipment, thereby raising doubt in the minds of the media, legislators, and the general public. Many of these same people advocate that a hand count of election ballots is the only reliable method for determining election results. Therefore, we decided to conduct a basic Election Ballot Hand Count Study in El Paso County, Colorado.

In this report we have outlined the parameters we established, observations of the hand count process, and debriefings of the participants. We do not intend to make recommendations but rather let people draw their own conclusions based on this initial Hand Count Study. It has yet to be determined if we will conduct future, perhaps more sophisticated, hand counting studies.

PREPARATION: On January 3, 2008, Bob Balink met Harvie Branscomb (Coloradans for Voting Integrity) at the State Capitol. In a subsequent telephone conversation Mr. Branscomb was invited to consult with the Election Department in regard to conducting the upcoming Hand Count Study. Mr. Branscomb met with the Election Department managers on two occasions and gave further input via e-mail and telephone calls. Ballots used for this study were actual ballots from the 2006 General Election.

MACHINE COUNT: John Hollenbaugh and Janice Littlefield conducted the machine count on federally and state-certified, and locally tested AccuVote optical scan tabulation equipment on Wednesday, January 16, 2008. They counted the ballots from each precinct twice, on two separate machines. The totals matched. The hand count groups were not given the results of the machine counts. The results of the machine counts were locked up in the Election Counting Center and only those who conducted the counts had access to the results.

OVERVIEW OF SORT & STACK METHOD (GROUP A)

Group A consisted of four judges who worked in teams of two (Groups 1A & 2A) over 4 ½ days. They completed the hand counting project using the sort and stack method (refer to Appendix 1A for procedures). Both teams counted ballots from precincts 136, consisting of 354 ballots, and precinct 192, consisting of 322 ballots. Therefore, we have two hand counts for each precinct. The two hand counts were compared to the optical scan count and the two hand counts also were compared to each other. (See Appendixes 2A & 3A for analysis.)

Precinct 136

Group 1A completed the first hand count of precinct 136 and their count was more accurate when compared to the optical scan count than Group 2A's count. In Group 1A's hand count 60% of the races came out with the same results as the optical scan count and 40% of the races came out with different results. In Group 2A's hand count 36% of the races came out with the same results as the optical scan count and 64% of the races came out with different results. When the two hand counts were compared, 21% of the races matched and 79% were off.

Precinct 192

Group 1A completed the second hand count of precinct 192 and again their count was more accurate when compared to the optical scan count than Group 2A's count. In Group 1A's hand count 74% of the races came out with the same results as the optical scan count and 26% of the races came out with different results. In Group 2A's hand count 26% of the races came out with the same results as the optical scan count and 74% of the races came out with different results. When the two hand counts were compared 26% of the races matched and 74% were off.

Comments

- By looking at the results one could conclude that the differences were due to the ballot being placed in the wrong stack (i.e. a vote for Bush was placed in the Kerry stack and vice versa). This should not have happened as the hand counters were instructed to go through each stack to ensure that the ballots were placed in the correct stack. Perhaps the observer or another judge who was not part of the sorting should have been the one to go through the stacks to ensure that the ballots were sorted correctly.
- Interpreting voter intent also could lead to a difference between the hand count and the optical scan count. For example, a voter fills in the ovals for two different candidates but puts an X through one of them or circles one of them. The optical scan would read this as an over vote and the race would not be counted. In a hand count the judge could try to interpret voter intent and count the race.
- Both groups 1A & 2A added up the total votes after each race to ensure that they balanced with their beginning number of ballots to count. This probably led to more accuracy but also took more time because they often had to recount when they didn't balance.
- The average age of group 1A was 64 years and the average age of group 2A was 75 years. Age could be a contributing factor to the accuracy of the count.
- The variances between the machine count vs. the hand count and the two hand counts ranged from 1-131.

Cost

The hand counting judges were paid \$10.00 an hour. The four judges together worked 141.75 hours for a cost of \$1,417.50. There was one observer for Group A who worked 35.25 hours for a cost of \$352.50. The judges counted two precincts, but if we did a hand count for an election the judges would only count one precinct. See appendix 1E.

OVERVIEW OF READ & MARK METHOD (GROUP B)

Group B consisted of eight judges who worked in teams of two over a 4 day period. They completed the hand counting project using the read and mark method (refer to Appendix 1B for procedures). Group B counted ballots from precincts 181, consisting of 432 ballots, and precinct 339, consisting of 374 ballots. Two hand counts were completed for each precinct. The two hand counts were compared to the optical scan count and the two hand counts also were compared to each other. (See Appendixes 2B & 3B for analysis)

Precincts 181 & 339

The hand count did not totally match the optical scan count in any of the races. The difference between the hand count and the optical scan count varied race to race. The difference could be attributed to several factors:

1. The person reading the ballot misread the ballot
2. The person marked the tally sheet incorrectly
3. Different interpretation of voter intent

Comments

- This group was instructed not to tally the total votes for each race. This led to some races not adding up to the beginning number of ballots to be counted. Had the group been instructed to tally the total votes for each race they would have known if they did not balance and could have recounted. This may have led to more accuracy but it also would have increased the time it took to count.
- Interpreting voter intent could also lead to a difference between the hand count and the optical scan count. For example, a voter fills in the ovals for two different candidates but puts an X through one of them or circles one of them. The optical scan would read this as an over vote and the race would not be counted. In a hand count the judge could try to interpret voter intent and count the race.
- The average age of the judges from group B is 70 years.
- The variances between the machine count vs. the hand count and the two hand counts ranged from 1-24.

Cost

The hand counting judges were paid \$10.00 an hour. The eight judges together worked 260 hours for a cost of \$2,600.00. There was one observer for Group B who worked 32.5 hours for a cost of \$325.00. The judges counted two precincts, but if we did a hand count for an election the judges would only count one precinct. See appendix 1E.

OVERVIEW OF SINGLE INDIVIDUAL COUNT (GROUP C)

Group C consisted of one individual doing a solo count using the hand counting method of his choice over a period of 6 days. The individual counted ballots from precinct 053, consisting of 265 ballots. Two

hand counts of the same ballots were completed. The two hand counts were compared to the optical scan count and the two hand counts also were compared to each other. (See Appendix 1C for method used.)

Precinct 053

In the first hand count 24% of the races came out with the same result as the optical scan count and 76% of the races came out with different results. In the second hand count 25% of the races came out with the same results as the optical scan count and 75% of the races came out with different results. When the two hand counts were compared 22% of the races matched and 78% were off.

Comments

Interpreting voter intent also could lead to a difference between the hand count and the optical scan count. For example, a voter fills in the ovals for two different candidates but puts an X through one of them or circles one of them. The optical scan would read this as an over vote and the race would not be counted. In a hand count the judge could try to interpret voter intent and count the race. The variances between the machine count vs. the hand count and the two hand counts ranged from 1-14.

Cost

The hand counting judges were paid \$10.00 an hour. The individual worked 41.95 hours for a cost of \$419.50. The individual counted the ballots twice, but if we did a hand count for an election the judges would only count them one time. See appendix 1E.

NOTES/OBSERVATIONS

If the hand count test resulted in identical or almost identical results what does that mean?

1. It validates that hand counting is accurate.

OR

2. It validates that machine counting is accurate.

Going to a hand count of ballots requires a complete paradigm shift. Are the media and the public willing to wait 3-5 days for **unofficial** results and at what cost? Many indicate that they don't care how quickly they get results, they just want the results to be accurate, but the reality is that people want results on election night; even though they know the results are unofficial.

At what point do you end the hand count. If the first and second counts don't match, do you count a third time, fourth time, etc. until you get two counts that match?

If you were to do a hand count for an election when would the hand count begin?

1. After the polls have closed using new election judges to hand count the ballots.
2. Begin the next day using the same election judges who worked at the polling places.

Any input with regard to this study would be most welcome. Please note: Many complex and more sophisticated hand count studies have been previously conducted in other counties and states and we encourage interested persons to review those studies as well.

Appendix 1A

January 2008 Hand Count Project El Paso County

Hand Count Procedures Group A Counting Method: Sort and Stack

1. The ballots will be removed from the ballot box and sorted by precinct. The total for each precinct shall be logged on the Judges Statement of Ballots.
2. The ballots will now be sorted by ballot style.
3. Each ballot style will be tallied by two election judges. Begin with the first race on the ballot. Sort your ballots in stacks by the vote cast on each ballot. All votes cast for the first choice on the first race on the ballot will be stacked together; all votes cast for the second choice on the first race on the ballot will be stacked together and so on. You will have a stack of ballots for each vote cast for each choice on the ballot for race one.
4. Once all ballots are correctly sorted double check each stack for accuracy.
5. Count the ballots in each stack and record that number on the tally sheet. When each vote choice in the first race has been recorded. Begin the sort process again with the second race on the ballot.
6. If there is an overvote, all votes for that office, ballot issue or question shall not be counted but shall be logged on the tally sheet in the overvote column.
7. *If the elector's intent cannot be determined in a particular race it shall be logged on the tally sheet in the "can't determine" space on the tally sheet. The ballot shall be separated for the counted ballots and placed in the envelope marked defective. Paper has been provided to you so you can note the race in which the voter's intent could not be determined. See additional notes below.
8. In determining whether to record a vote cast for a write-in candidate the oval on the ballot must be completed. Whether there is a name listed on the line for the write-in or not. C.R.S. 1-7-304 (1) states in part that to cast a vote, the eligible elector shall clearly mark or stamp in the appropriate square or place a cross mark (X) opposite the name of the candidate or the names of the joint candidates of the elector's choice for each office to be filled.
9. When the entire ballot has been tallied, exchange the stack of ballots with the other group of judges in your precinct. Tally those ballots using the same method.
10. When each stack of ballots has been tallied twice, your observer will total your tallied sheets to verify both counts are the same. If the results between the two counts are not the same a third count will be conducted.
11. When the tally is complete the judges will insure the race total is the same as the Hand count of ballots at the start.

* C.R.S. 1-7-309. Determination of improperly marked ballots. (1) Votes cast for an office to be filled or a ballot issue to be decided shall not be counted if an elector marks more names than there are persons to be elected to an office or if for any reason it is impossible to determine the elector's choice of candidate or vote concerning the ballot issue. 1

(2) A defective or an incomplete cross mark on any ballot in a proper place shall be counted if no other cross mark appears on the ballot indicating an intention to vote for some other candidate or ballot issue.

(3) No ballot shall be counted unless it has the official endorsement required by section 1-7-302.

(4) Ballots not counted because of the election judges' inability to determine the elector's intent for all candidates and ballot issues shall be marked "defective" on the back, banded together and separated from the other ballots, returned to the ballots, and preserved by the DEO pursuant to section 1-7-801.

Appendix 3A
Analysis of Precinct 136

Information on 1st Tally

Group: 1A
Election Judges: 2 & 15
Method Used: Sort & Stack
Precinct: 136
of Ballot Styles: 2
of Ballots: 354
of Races: 53
Amount of Time Spent on Hand Count: 17 ½ hours

Hand Count vs. Optical Scan Count

of Races that Matched: 32
of Races that were off by 1 vote: 16
of Races that were off by 2 votes: 2
of Races that were off by 3 votes: 1
of Races that were off by 4 votes: 1
of Races that were off by 5 or more votes: 1
*Race was off by 30 votes. It appears as if 30 ballots were not accounted for.
Percentage of Races that Matched: 60%
Percentage of Races that Were Off: 40%

Information on 2nd Tally

Group: 2A
Election Judges: 7 & 14
Method Used: Sort & Stack
Precinct: 136
of Ballot Styles: 2
of Ballots: 354
of Races: 53
Amount of Time Spent on Hand Count: 15 ¾ hours

Hand Count vs. Optical Scan Count

of Races that Matched: 19
of Races that were off by 1 vote: 12
of Races that were off by 2 votes: 8
of Races that were off by 3 votes: 1
of Races that were off by 4 votes: 2
of Races that were off by 5 or more votes: 11
Percentage of Races that Matched: 36%
Percentage of Races that Were Off: 64%

Hand Count of Group 1A vs. Hand Count of Group 2A

of Races that Matched: 11
of Races that were off by 1 vote: 16
of Races that were off by 2 votes: 9
of Races that were off by 3 votes: 2
of Races that were off by 4 votes: 2
of Races that were off by 5 or more votes: 13
Percentage of Races that Matched: 21%
Percentage of Races that Were Off: 79%

Appendix 1B

January 2008 Hand Count Project El Paso County

Hand Count Procedures Group B

Counting Method: Read & Mark (Each ballot read and counted separately)

1. Remove all ballots from the ballot box.
2. Ballots must be sorted in stacks by precinct.
3. A total count of voted ballots in each precinct must be logged on the Judges Statement of ballots form.
4. After the total ballots have been logged on the statement of ballots form the ballots will now be sorted by ballot style.
5. Each precinct has two ballot styles. Two judges in each precinct will be responsible for tallying the ballots for one ballot style.
6. Each set of two judges should have their stack of ballots in front of them so the counting may begin.
7. Locate the tally sheet for your stack of ballots.
8. Each ballot shall be read and counted separately. Tally the votes by reading each ballot completely before starting on the next. The votes cast for an office to be filled, a ballot issue or ballot question to be decided shall be placed on the tally sheet in the order in which they appear on the official ballot. If there is an overvote, all votes for that office, ballot issue or question shall not be counted but shall be logged on the tally sheet in the overvote column.
9. * If the elector's intent cannot be determined in a particular race it shall be logged on the tally sheet in the "can't determine" space on the tally sheet. The ballot shall be separated for the counted ballots and placed in the envelope marked defective. Paper has been provided to you so you can note the race in which the voter's intent could not be determined. See additional notes below.
10. In determining whether to record a vote cast for a write-in candidate the oval on the ballot must be completed. Whether there is a name listed on the line for the write-in or not. C.R.S. 1-7-304 (1) states in part that to cast a vote, the eligible elector shall clearly mark or stamp in the appropriate square or place a cross mark (X) opposite the name of the candidate or the names of the joint candidates of the elector's choice for each office to be filled.
11. When each stack of ballots has been tallied twice, your observer will total your tallied sheets to verify both counts are the same. If the results between the two counts are not the same a third count will be conducted.

* C.R.S. 1-7-309. Determination of improperly marked ballots. (1) Votes cast for an office to be filled or a ballot issue to be decided shall not be counted if an elector marks more names than there are persons to be elected to an office or if for any reason it is impossible to determine the elector's choice of candidate or vote concerning the ballot issue. 1

(2) A defective or an incomplete cross mark on any ballot in a proper place shall be counted if no other cross mark appears on the ballot indicating an intention to vote for some other candidate or ballot issue.

(3) No ballot shall be counted unless it has the official endorsement required by section 1-7-302.

(4) Ballots not counted because of the election judges' inability to determine the elector's intent for all candidates and ballot issues shall be marked "defective" on the back, banded together and separated from the other ballots, returned to the ballots, and preserved by the DEO pursuant to section 1-7-801.

Appendix 3B
Analysis of Precinct 181

Information on 1st Tally

Election Judges: 6, 9, 10, 13

Method Used: Read & Mark

Precinct: 181

of Ballot Styles: 2

of Ballots: 432

of Races: 53

Amount of Time Spent on Hand Count: Approximately 16 hours

Hand Count vs. Optical Scan Count

The difference between the hand count and the optical scan count varied race to race.

The difference could be attributed to several factors:

1. The person reading the ballot misread the ballot
2. The person marked the tally sheet incorrectly
3. Different interpretation of voter intent

It appears that in the hand count the blank votes were not accounted for in the judge races and county office races.

Information on 2nd Tally

Election Judges: 4, 5, 6, 9, 10, 11, 12, 13

Method Used: Read & Mark

Precinct: 181

of Ballot Styles: 2

of Ballots: 432

of Races: 53

Amount of Time Spent on Hand Count: Approximately 16 hours

Hand Count vs. Optical Scan Count

The difference between the hand count and the optical scan count varied race to race.

The difference could be attributed to several factors:

1. The person reading the ballot misread the ballot
2. The person marked the tally sheet incorrectly
3. Different interpretation of voter intent

Hand Count vs. Hand Count

The difference between the two hand counts varied race to race. The difference could be attributed to several factors:

1. The person reading the ballot misread the ballot
2. The person marked the tally sheet incorrectly
3. Different interpretation of voter intent

Appendix 7B
Analysis of Precinct 339

Information on 1st Tally

Election Judges: 4, 5, 11, 12

Method Used: Read & Mark

Precinct 339

of Ballot Styles: 2

of Ballots: 374

of Races: 55

Amount of Time Spent on Hand Count: Approximately 14 hours

Hand Count vs. Optical Scan Count

The difference between the hand count and the optical scan count varied race to race.

The difference could be attributed to several factors:

1. The person reading the ballot misread the ballot
2. The person marked the tally sheet incorrectly
3. Different interpretation of voter intent

It appears that in the hand count the blank votes were not accounted for in the judge races and county office races

Information on 2nd Tally

Election Judges: 4, 5, 11, 12

Method Used: Read & Mark

Precinct 339

of Ballot Styles: 2

of Ballots: 374

of Races: 55

Amount of Time Spent on Hand Count: Approximately 14 hours

Hand Count vs. Optical Scan Count

The difference between the hand count and the optical scan count varied race to race.

The difference could be attributed to several factors:

1. The person reading the ballot misread the ballot
2. The person marked the tally sheet incorrectly
3. Different interpretation of voter intent

It appears that in the hand count the blank votes were not accounted for in the judge races and county office races

Hand Count vs. Hand Count

The difference between the two hand counts varied race to race. The difference could be attributed to several factors:

1. The person reading the ballot misread the ballot
2. The person marked the tally sheet incorrectly
3. Different interpretation of voter intent

Appendix 1C Comments from Charles Corry

Harvie and Al,

We finished up the hand count experiment yesterday. My understanding is that three separate groups of citizen judges participated in the experiment. There was no communication among the three groups of citizens participating in the experiment to preserve objectivity. As Bob Balink promises above, such comparisons will come later.

The two other groups used methods different than mine and I currently have only general information on their methods so I won't comment.

For my part I did a solo count using any method of my choice of El Paso County, Colorado, precinct 53 from the November 2006 election. Absentee and early voting ballots were not included in the 265 ballots I was given. Only ballots from the precinct polling place were used in this experiment. As many errors with paper ballots are known to be introduced when mailed ballots are counted by optical scanners, those errors will not be present in the results from this experiment. That is desirable in order to make an accuracy comparison between hand counting and use of a Diebold optical scanner under precinct conditions.

I twice counted the same ballots using a sort-and-stack method. Both tallies were done "blind," i.e., I have not yet seen the results of either hand count I made, nor was any comparison made with the Diebold optical scanner count made during the 2006 election.

I first sorted the ballots into batches of 10. The batches of 10 were then combined into batches of 50 and all counts were made on five batches of 50 plus a remainder batch of 15. Totals for each batch, e.g. Yes, No, Blank, Can't Determine Voter Intent, were always added after each batch to ensure a total of 50 (or 15). That caught a number of errors in my tabulation. However, I did not add up the results for each race or issue after all ballots were counted to preserve objectivity. This method also caught many other errors resulting from fatigue, distractions (they were remodeling the room I was in while I was doing the count), people coming and going and talking, phone ringing, and other inevitable counting errors.

I modified the sort-and-stack method for some races and issues, e.g., judicial races, to count in what I call "pattern voting." Since most citizens either vote yes, no, or blank for all judges it is possible to count all those races with one pass. If that method proves accurate and feasible it cuts counting time roughly in half for those races and issues where it can be used.

The ballots were originally printed by Diebold as best I can determine. I was not at all impressed with the quality of the printing. A number of ballots had blue lines running down the back. The ballots all allowed bleed through from the marking devices used in the precinct. On a number of ballots the vote ovals had red ink marks included in them from the printing. Other printing problems were evident on some of the ballots as well.

In many cases the voter had marked the ballot in a manner that would likely be deceptive for the optical scanner. Also, no one had any idea how completely the oval had to be filled in for the Diebold optical scanner to correctly tabulate the vote. Based on my preliminary observations I would estimate such errors at approximately 1% of the total. We will certainly be looking at that problem further when comparisons are made.

Appendix 1C
Comments from Charles Corry

The time for me to count each race or issue was kept by an observer from the county clerk's office. She also made extensive notes based on her observations and my comments and suggestions during the process. As the ballots used were designed to be read by an optical scanner they were not adapted to hand counting and this experiment should not be used in any manner to estimate time required to do a hand count. Considerable redesign of the tally sheets I was given would also be desirable to speed the process and reduce errors.

All in all I was very pleased with the experiment and, as always the staff of the El Paso County Clerk's office were a delight to work with.

Chuck Corry

Analysis of Precinct 053

Information on 1st Tally

Election Judges: Charles Corry

Method Used: Sort & Stack

Precinct 053

of Ballot Styles: 1

of Ballots: 265

of Races: 51

Amount of Time Spent on Hand Count: 12.5 hours

Hand Count vs. Optical Scan Count

Appendix D

NOTES & OBSERVATIONS TAKEN BY STAFF AND OBSERVERS

- A couple of the judges that were paired up to work together had very different personalities and it made it difficult for them to work together.
- One of the observers noted “The variation in speed of two judges working together can cause frustration.”
- Some of the comments that the hand counting judges were heard saying were “monotonous” and “tedious.”
- Around 3:00 each day the fatigue seemed to set in. The counting slowed down and the mistakes increased.
- Two of the judges from group A counted their ballots a little different than the other groups. They thought it would be faster to count the first race on each ballot and then move on to the next race. They used this process during the entire hand count.
- Two of the judges from group A changed their method of hand counting. By mid-afternoon on the first day it was observed that they had resorted to the sort and stack method. They were asked to go back to their original method of counting using the read and mark method and they did.
- On day 3 there was confusion amongst two judges from group A regarding the blank and overvotes. If a race was overvoted they marked it as blank on the tally sheet. The optical scan would have counted the race as an overvote.

Appendix 1E
Cost

| Code | Hours | Wages |
|--|--------------|-------------------|
| Group A | | |
| 1 | 35.25 | \$352.50 |
| 2 | 34.00 | \$340.00 |
| 7 | 36.25 | \$362.50 |
| 14 | 36.25 | \$362.50 |
| 15 | 34.00 | \$340.00 |
| Sum Total | | \$1,757.50 |
| Group B | | |
| 4 | 32.50 | \$325.00 |
| 5 | 32.50 | \$325.00 |
| 6 | 32.50 | \$325.00 |
| 8 | 32.50 | \$325.00 |
| 9 | 32.50 | \$325.00 |
| 10 | 32.50 | \$325.00 |
| 11 | 32.50 | \$325.00 |
| 12 | 32.50 | \$325.00 |
| 13 | 32.50 | \$325.00 |
| Sum Total | | \$2,925.00 |
| Group C | | |
| 3 | 41.95 | \$419.50 |
| Sum Total | | \$419.50 |
| | | |
| Total Judge Pay | | \$5,102.00 |
| | | |
| *Each judge counted two precincts. | | |
| **Does not include cost of fulltime staff oversight. | | |

Appendix 2E
 Future Cost Estimates
 A Few Scenarios

| Scenario 1A | |
|---|------------------|
| Method: | Sort & Stack |
| # of Judges Per Precinct*: | 3 |
| # of Precincts: | 387 |
| # of Hours to Count Ballots One Time : | 17 |
| Hourly Rate: | \$10 |
| Total Cost | \$197,370 |

| Scenario 2A | |
|--|------------------|
| Method: | Sort & Stack |
| # of Judges Per Precinct*: | 3 |
| # of Precincts: | 387 |
| # of Hours to Count Ballots Twice : | 34 |
| Hourly Rate: | \$10 |
| Total Cost | \$394,740 |

| Scenario 1B | |
|---|------------------|
| Method: | Read & Mark |
| # of Judges Per Precinct**: | 4 |
| # of Precincts: | 387 |
| # of Hours to Count Ballots One Time : | 17 |
| Hourly Rate: | \$10 |
| Total Cost | \$263,160 |

| Scenario 1B | |
|--|------------------|
| Method: | Read & Mark |
| # of Judges Per Precinct**: | 4 |
| # of Precincts: | 387 |
| # of Hours to Count Ballots Twice : | 34 |
| Hourly Rate: | \$10 |
| Total Cost | \$526,320 |

*Three judges are needed for this method. Two of the judges will sort and count the ballots and the third judge will observe to verify the ballots are being sorted and counted correctly.

**Four judges are needed for this method. One judge will read the ballot, the second judge will mark the tally sheet, the third judge will observe the judge reading the ballot and the fourth judge will observe the judge marking the tally sheet.

Appendix F
BALLOT HAND COUNT PROJECT
(Participant Survey)

| |
|--|
| 1. Do you feel a hand count of ballots is an effective way to produce election results? 3 Yes 11 No Explain. |
| 1 - No - This is a costly, time consuming process that is out-dated. Election results would be delayed. |
| 2 - No - Human error is much more probable. Time consumption would be astronomical. |
| 3 - Yes, it is transparent and open to public view and oversight. Therefore it is more trusted than machine counts. |
| 4 - No - Only if there is a huge discrepancy |
| 5 - No - I think a machine count is more accurate and much quicker. |
| 6 - No - It takes time. Results may be delayed. Open for lots of human error |
| 7 - No - There is too much margin for error. |
| 8 - No - Less mistakes using the AccuVote machines. |
| 9 - No - Talking self out of job. But accuvote looks realistic. 7 man minutes seems "fast" by my reconing. |
| 10 - No |
| 11 - No - Too much margin for error - both in reading and tallying |
| 12 - Yes - It's effective but, I feel the machine is also more accurate |
| 13 - Yes - Effective, but very slow; one must have a really good partner |
| 14 - No - The main reason is the time factor which is involved in the counting of each portion of the ballots. |
| 15 - Yes |
| 2. What benefits (PROS) do you see from hand counting of ballots? |
| 1 - None! AccuVote machines and touch screens are the greatest! |
| 2 - You will be able to provie to inefficiency of hand counting. |
| 3 - Trust in elections. |
| 4 - Insures accuracy. |
| 5 - There are numerous methods of hand counting so a counter can start at needed times. I would be hard pressed to find a benefit. |
| 6 - None |
| 7 - I didn't see an advantage to hand counting. My experience with the AccuVote machines makes me a fan. Also I was impressed with the touch machines simplicity of operation. |
| 8 - Double check of machine counts. |
| 9 - Little. Perhaps keeps some political stability among "na" sayers. |
| 10 - It takes much time. |
| 11 - There is a visible accounting of each race tallied. |
| 12 - Blank |
| 13 - If handcount versus machine count - I can see no benefits. |
| 14 - Proper counting of ballots by hand can produce good results and may be able to spot areas which a machine would not be able to spot. |
| 15 - Better counts (more actual) |
| |

Appendix F
BALLOT HAND COUNT PROJECT
(Participant Survey)

| |
|---|
| 3. What problems (CONS) do you see from hand counting of ballots? |
| 1 - 1. Very time consuming 2. Accuracy of count is questionable 3. Speed of counting varies with skill of the counter 4. Tedious work |
| 2 - Everyone has their own idea of what is a countable ballot. Different methods of counting will cause some error. |
| 3 - Overcoming the mindset of election officials and county clerks that it can't be done. |
| 4 - Intensive delay; is not cost effective. |
| 5 - Too easy to make mistakes and sometimes difficult to find. |
| 6 - Errors!! Results may be delayed. |
| 7 - It was difficult to stay on the correct box when we did the sort and stack. If there is a problem in a precinct then it might be advantageous to count that precinct. Delayed results would be a problem. |
| 8 - More mistakes. |
| 9 - Higher error rate than AccuVote. Diminished speed at election night. |
| 10 - None |
| 11 - Not balancing and attaining an accurate count. |
| 12 - Blank |
| 13 - One can be distracted. After so long a time it would be easy to make errors because of tiredness. |
| 14 - Time and amount of personal involved and the way that a check and double check have to be involved in order to insure a proper count. |
| 15 - Late final result |
| 4. What suggestions do you have for speeding up the hand count process, while still maintaining accuracy? |
| 1 - 1. Speedy counters 2. Specific instructions as to process efficiency |
| 2 - Very specific directions - eliminate as many variables as possible. |
| 3 - Have separate color coded ballots for each category, e.g., federal, state, county, local candidates, and likewise for ballot issues. Drawback is makes it harder to maintain ballot inventory. |
| 4 - It just is time consuming; there really is not a way to speed up the process |
| 5 - We need a variety of methods -- it's possible selecting a single might help. |
| 6 - Fresh clean mind someone who hasn't worked the polls and extra people |
| 7 - Blank |
| 8 - Counting the ballot all at once instead of counting one item at a time |
| 9 - Your office has perhaps best plan. |
| 10 - Same as we did |
| 11 - None - it is just time consuming process that is needed for accuracy. |
| 12 - I would prefer to use the accu machine |
| 13 - Can't think of any, the process we used seemed good. |
| 14 - The use of the personal that are used to doing this type of counting in the past. Skills are built by repetition. |
| 15 - None |

Appendix F
BALLOT HAND COUNT PROJECT
(Participant Survey)

| |
|---|
| 5. Would you be interested in participating in additional ballot hand count projects? 14 yes ____no Explain. |
| 1 - Blank |
| 2 - If you plan on doing this again, I would be happy to help. |
| 3 - Yes |
| 4 - Blank |
| 5 - Definitely |
| 6 - Blank |
| 7 - I felt like I learned quite a bit about the process of a system with my partner. |
| 8 - Blank |
| 9 - If it comes to this! |
| 10 - Blank |
| 11 - Always enjoy working with friends and the professionals to learn more re elections and what is happening with them (Staying in the know) |
| 12 - See below |
| 13 - Blank |
| 14 - This was a challenging and interesting project. |
| 15 - Blank |

| |
|--|
| GENERAL COMMENTS: (Please enter any comments you would like regarding your participation in this project) |
| 1 - I enjoyed working on this project. It was well organized and methodically planned out. Hopefully those who matter will pay attention to the results! |
| 2 - Liz and Keri are very organized, and used well thought out procedures for a first time effort. |
| 3 - Thanks for finally undertaking this valuable public process. Now make the results public. |
| 4 - Personally the process was professionally done. It is a learning proess. The managers in charge were extremely well versed and extremely knowledgeable. The meals were excellent. Thank you. |
| 5 - Everyone in the group worked well together and the facilities were comfortable. The lunches were terrific and breaks timely. Thank you. |
| 6 - When hand counting you can have no distractions. To check will be very timely. Open for a lot of human errors. |
| 7 - I enjoyed working with my partner and the other judges in our area. The election staff are exceptional. |
| 8 - I think the teams worked very well together and were efficient. |
| 9 - Blank |
| 10 - None |
| 11 - I enjoyed doing the process even though it was tedious. Gave me an opportunity to think about the entire counting process regardless of machine vs. the hand count. The personnel conducted the project in a professioanl manner even though it was a learning experience for them too. The food was delicious and appreciated and thanks for calling me. |
| 12 - I enjoyed working in this project and with your staff. Feel free to call on me at anytime. The lunches were great. |
| 13 - A great appreciation for machines. |
| 14 - At the beginning time for each was slow but after getting used to the team member the work became proficient nad enjoyable. The work site was great and the members were great. |
| 15 - None. Hand count is more actual but later end result. |
